Recommendations for the usability improvement

1. Create a clickable logo on the left or in the center of the header. The logo should be available on every page and leads to the home page. The logo could be duplicated in the footer.
2. Create a search field for the user to search for the needed information.
3. Create a scroll back to top button for quick navigation to the top of the page.
4. Add feedback form for users for quick communication.
5. Hide the amount of services provided. The services should be displayed by clicking on the "Services" button in the header in drop-down menu.
